Gentlemen:

JOSEPH RODGERS & SONS Ltd. of Sheffield, England, makers of the world famous STAR & CROSS cutlery, have just completed a new catalog for the U.S.A. market.

A copy of this beautiful catalog, together with price list, subject to 40% trade discount and terms Net 30, 2%-10, f.o.b. New York, is inserted in our convenient loose-leaf catalog binder enclosed herewith.

Of equal interest will be the section, Catalog No. 38, comprising a complete line of Woodworking Tools with list prices and trade discount schedule. WM. MARPLES & SONS, HERRING BROS. and HENRY TAYLOR, Ltd. are among the earliest manufacturers in the world and still producing a superior quality, in many cases hand forged goods.

Our lines of Turning and Carving Tools also Spokeshaves are more complete in pattern range than any others offered to the Hardware Trade, and we invite you to establish these lines for better service to your customers.

May we suggest checking your stocks of these lines, and send us your order which will put you in a position to enjoy the Fall demand for these world famous goods.

Yours very truly,

ALFRED FIELD & CO., INC.

INTRODUCTION

The story of the Sheffield Cutlery Trade is probably one of the most fascinating chapters in all the romance of industry. Right through the story the name of Joseph Rodgers and Sons, Limited, and their world famous star and cross * ✕ trade mark granted in 1682, plays an important part.

The star and cross mark is significant evidence of something more than mere craftsmanship in steel. It is eloquent of the great spirit that has survived through many changes in the history of industry.

The tacit acceptance of the name "Rodgers" and the quality for which it stands is standard throughout the world. Individual pride of work is still as strong today throughout the House of Rodgers.

Such workmanship as this demands and deserves the finest materials. Since 1887 Rodgers have been making their own steel as an assurance of fitting quality.

Among the first in the Sheffield Cutlery world, Rodgers have also been the foremost in every advance that the years have brought. Stainless steel opened a new era, and today Joseph Rodgers and Sons, Limited, are the only Cutlers in England who make their own steel.

The Sportsman's Knife on opposite page is a fitting introduction to the pages that follow. It symbolizes tradition, skill and resource reflected in the many patterns of carbon steel and stainless steel cutlery illustrated throughout this catalog. However, this catalog covers only such goods as are in popular demand by the trade of the States and does not in any way include the production for other world-wide markets of Rodgers.

GUARANTEE

"Star and Cross" Cutlery is guaranteed against defects in workmanship and materials, but not for abuse such as improper grinding or sharpening, failure to oil joints of pocket knives thus causing blades to protrude above handle when closed, etc.

All "Star and Cross" Cutlery claimed to be defective must be submitted to Alfred Field & Co., Inc., for inspection. We reserve the right to pass on the validity of all claims for replacement.

USEFUL INFORMATION

Stainless Steel

It is a popular belief that knives made of stainless steel never possess a keen cutting edge. When knives are badly ground there is a good reason for this belief, as it is impossible to sharpen effectively a blade which has been inadequately ground. On the other hand, a very keen edge can be easily obtained on a well-ground blade. A further contributory cause to this unfounded belief is due to the neglect, on the part of the user, to sharpen Stainless Steel Knives. Prior to the invention of Stainless Steel, when ordinary steel knives were in use, this latter kind of knife had to be cleaned on a knife board and in the process of cleaning the knives were unwittingly sharpened. We, therefore, recommend that Stainless Steel Knives be sharpened from time to time, preferably, by using a steel.

It is also popularly believed that "Stainless" Steel is stainless under all conditions and is impervious to all acids, but this is an erroneous belief, doubtless due to the loose application of the term "Stainless."

The term "Stainless" must be understood in the relative sense seeing that, technically, there is no known metal which cannot be caused to enter into chemical action and, therefore, to corrode by placing it in a suitable mordant under suitable conditions, the noble metals, gold, platinum, etc., being no exceptions.

Notwithstanding the foregoing reservations, Stainless Steel articles can be kept free from stains providing that they receive proper treatment. It is recommended that articles, such as Table Knives, etc., be washed immediately after use. Food acids, especially those found in hot lamb and pork, attack Stainless Steel and are liable to cause stains if the knives are not thoroughly washed after use.

Pocket Knives

The handles or scales are all genuine Stag, Mother of Pearl, Ivoride, Nickel Silver or Stainless Steel. Synthetic or imitation Stag or Pearl is not used on any patterns shown in this catalog.

Tips, Caps or Bolsters are exclusively of Nickel Silver unless otherwise specified as steel.

Abbreviation Symbols

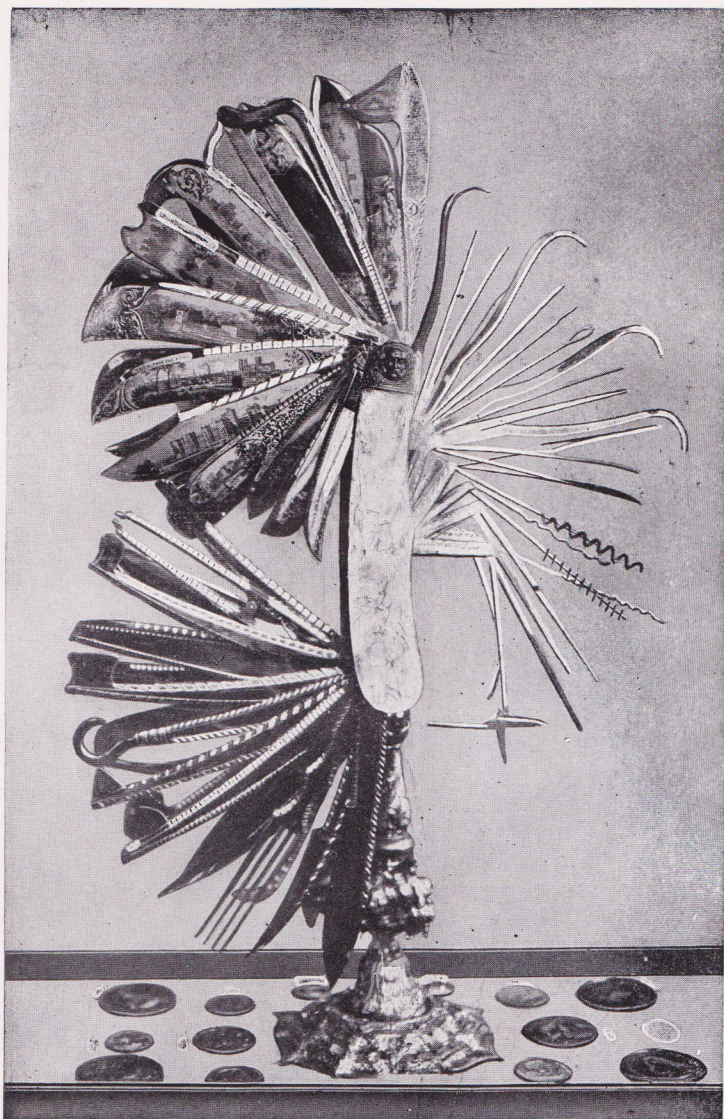

P. = Genuine Mother of Pearl
ST. = Genuine Stag
N/S. = Nickel Silver
IVD. = Grained Ivoride or Celluloid
SS. = Stainless Steel

NS. = No Shield
B/L. = Brass Lined
SKLD. = Shackle or Bale
S.F. = Sheep Foot Design

ADVERTISING MATTER

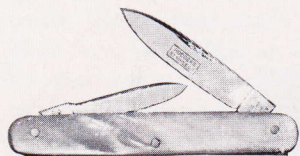

All Dealers stocking Rodgers "Star and Cross" Cutlery will, upon request, be supplied with an appropriate assortment of window and show case display material. A compact and most attractive show case display and stock box with compartments for displaying Pen and Pocket Knives furnished to Dealers gratis, upon request.

THE NORFOLK SPORTSMAN'S KNIFE

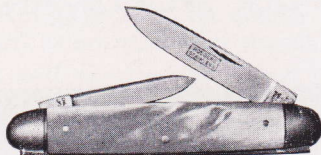

Here is shown the celebrated Norfolk Sportsman's Knife with its Seventy-five Blades. Most of these are etched or chased with hunting scenes, well-known buildings and persons, including Windsor Castle, Chatsworth House, Haddon Hall, The White House, and portraits of Queen Victoria, The Prince Consort, The Duke of Wellington and others. The scales are of Manila Pearl carved to depict a boar hunt and a stag hunt. It was made for the Exhibition of 1851 and took two years to manufacture.

Herring Bros.,	- - - - -	"Prize Medal" Brand, London, England Wood Carving Tools
Henry Taylor, Ltd.,	- - - - -	"Acorn" Brand, Sheffield, England Wood Carving Tools Chip Carving Knives Linoleum Block Cutting Tools
Goldenberg & Co.,	- - - - -	France Rifflers and Rasps

These tools are the products of manufacturers who have specialized for over 75 years in the production of superior Quality carving and carpenters' equipment made by experienced workmen who have in many cases spent a lifetime in this craft.

Only the very finest Sheffield steel is used.

All tools are deep tempered insuring fine smooth cutting as long as they exist.

Cheap tools are tempered only at the point and therefore useless after a few sharpenings.

TURNING TOOLS

Page 2-3

Beautifully polished, scientifically beveled and ground sharp ready to hone for use.

Complete equipment, standard size 6 inch blades, production tools with 8 inch blade and also short size with 4 inch blades. Individual tools or sets. Handles optional.

HAND CHISELS AND GOUGES

Page 4-5

Perfectly proportioned blades with selected polished hardwood handles.

Models No. 119-120-121-122-125-126-127-128-129 are supplied with leather top handles.

Models No. 119-120-121-122-123 and 124 are now standardly supplied honed ready for use.

SPOKESHAVES "Celebrated Joiners Tool"

Page 5

All our spokeshaves are beautifully hand made throughout ranging in overall length from 4½ to 12 inches offering you a large selection of sizes covering all needs. All blades are individually fitted.

CARVING TOOLS

Page 6-7

Our Carving Tools are of finest quality Sheffield steel hand forged and conform to chart on page 7 as to size and sweep. All tools standardly bevel ground, grinding sharp and honing optional (see note page 6).

Herring Bros. "Prize Medal" and Henry Taylor "Acorn Brand" are the two outstanding quality lines produced in England. We carry both lines to satisfy sectional demands and recommend either as representing the last word in quality carving tools.

Fish Tails — Supplied in Herring Bros. "Prize Medal" only.

Macaronis, Fluteronis, Backeronis and Wing Tools and all models of unshouldered tools are not listed in this catalog but can be furnished on special order.

GUARANTEE

Every article is carefully inspected before shipment: any article showing a defect in workmanship or material will be replaced free of charge if returned to us.

MARPLES WOOD TURNING TOOLS

The highest grade Sheffield Steel is used to produce these tools, deep tempered uniformly throughout length of blade.

Marples' tools are beautifully polished, scientifically beveled and ground sharp ready to hone for use; the most successful tools fostered by industry and adopted by schools and craftsmen.

Standard size turning tools are made with six (6) inch blades. The patterns: A Gouge, six types of chisels—1 Regular beveled both sides, also called a Skew, 2 Square Point, 3 Round Point, 4 Diamond or Spear Point, 5 Right Skew, 6 Left Skew and also a Parting Tool. The Gouges and Chisels are made in sizes from $\frac{1}{8}$ to 2 inches; the Parting Tool in three widths. This full range provides a tool for every purpose.

For heavy work and industrial use the Gouge and Chisel is also made in a Long and Strong model with eight (8) inch blade extra heavy; obviously the longer the blade the greater the scope of work.

For craftsmen with a preference for shorter tools Marples are producing in four (4) inch blades the most practical patterns assembled in recommended sets. The tools differ only from standard line in blade length; quality and workmanship is identical.

Use Marples Tools — one quality — always the best.

This chart illustrates the various sizes and sweeps that make up carving tool cutting edges. This reference should enable one easily to select tools as needs require as practically every basic or special cut can be located.
Suppose you require a gouge cut about 1/2 in. wide and 1/4 in. deep or radius. You will find such a cut listed under the 1/2 in. sizes on the chart in a line with the Nos. 49(8), 8, 17, 29 or 38. That cut then is obtainable in five different tool styles, viz., No. 49(8) Fishtail Gouge, No. 8 Straight Gouge, No. 17 Long Bent Gouge, No. 29 Spoon Gouge or No. 38 Back Bent Gouge. Your judgment should determine the style to be specified. In the same manner you may select different sizes of sweeps with a known style number.
When ordering, please state Pattern and Size required.

Pages 6 and 7 list a complete standard line of wood carving tools as used by the more advanced and PROFESSIONAL carvers.

Students and elementary workers should use the same quality tools for best results in workmanship.

Beginners in wood carving are sometimes confused in selecting the proper equipment from the extensive range of patterns and sizes. We have selected tools which make up the basic cutting sweeps for practical uses, and offer them in sets which we recommend for this class of work.

Sets Nos. 1, 2, or 3 are ideal working kits of straight chisels and gouges, parting tools and veiners. The blades are slightly shorter than our standard professional tools, making them somewhat handier to work with in the beginning, but QUALITY and DESIGN are the same so that the sweeps match in with our standard line. You will always find uses for them. These tools are full finished straw color, precisely balanced with hand polished maple handles, and GROUND SHARP requiring only honing for keen, sharp lasting edges.

As work with these tools progresses to advanced stages, you will find need for additional tools which may then be selected from the PROFESSIONAL line in building up your carving equipment.

SET No. 11—A popular priced and most practical set of fine quality Sheffield Steel tools equipped with balanced black rubberoid finished handles.

Originally made with a mind for students who want the best at a popular price, we now find many in the hands of experienced carvers who have found many practical uses for them. This set makes dandy equipment for model builders, etc., and particularly student organizations.

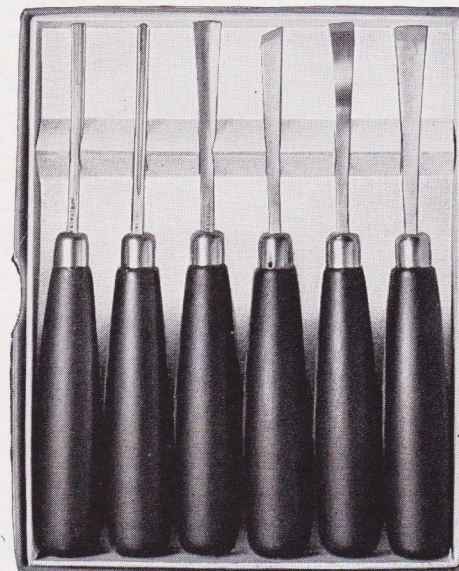

Tools in Set No. 11 are HONED SHARP ready for use.

Carving tools must be kept sharp. Our carving tools will stay sharp longest.

See Page 37-6 for set of Professional Style Tools recommended by Herbert W. Faulkner, author of "Woodcarving As A Hobby" and "Designs for Woodcarving."

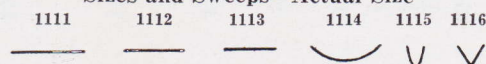

"Beginnings in Wood Carving"

A practical illustrated booklet showing you step by step how to proceed, by Clyde W. Lammey, an authority on wood carving. Price 60 cents.

Tool Sizes and Sweeps — Actual Size

Individual Tools \$.60 each

Block prints are pictures from hand engraved blocks which may be either wood or linoleum. Wood block printing originated centuries ago as an art and developed to the commercial stage so that for many years it was the leading means of printing pictures in books, magazines, etc.

With the introduction of linoleum as a block, general interest increased as it is easier to carve than wood and will not splinter. However, the finer lines of a woodcut cannot be reproduced on linoleum so that complete details are not cut and linoleum block printing remains more or less a poster process.

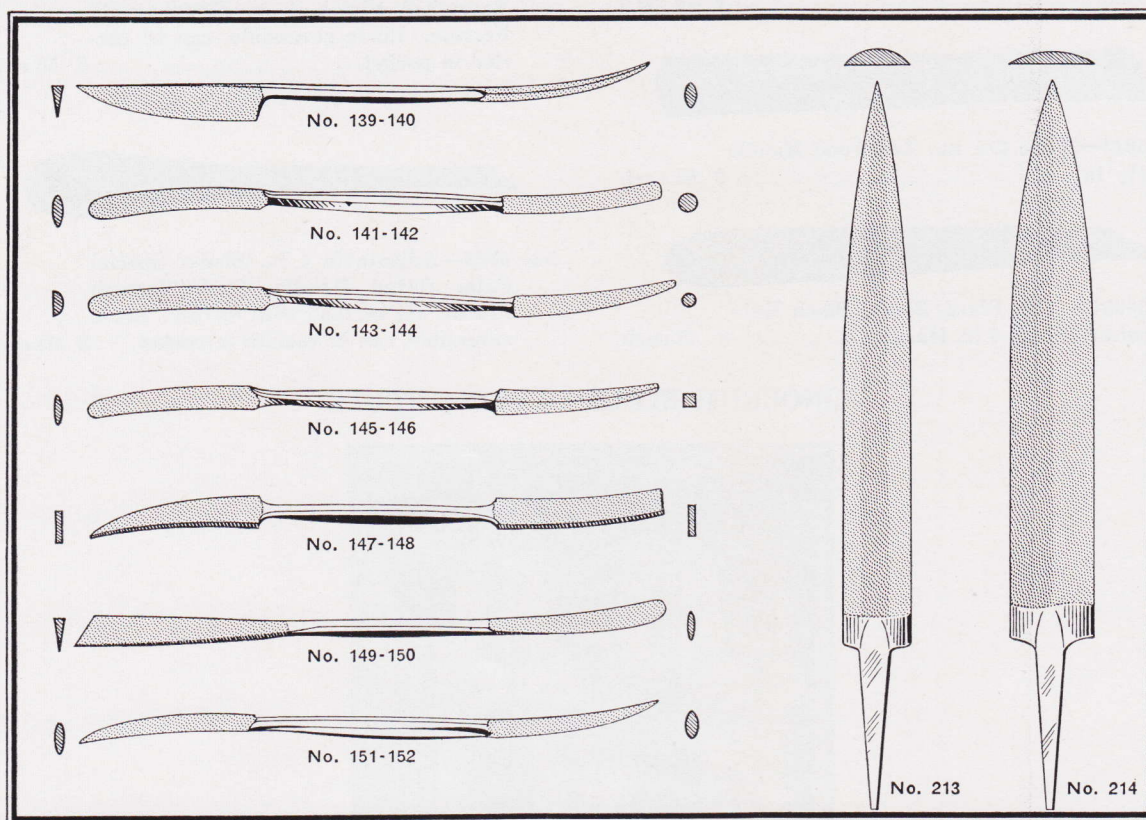

The fine results of the simplicities of linoleum block carving has made this art and pastime most popular so that it is now made a course of study in most schools and gradually leads to the more interesting art of wood carving.

Quality tools that hold keen sharp edges should be your equipment.

Taylor "Acorn" tools are the very best and correctly designed and balanced. The small graver handle just fits the palm of the hand and helps to make the work most enjoyable. Tools of Sets Nos. 4 and 5 are honed sharp ready for use.

WOOD CARVING FILES AND RASPS

GOLDENBERG & CO., FRANCE

RIFFLER FILES—7 Inch Length

CABINET RASPS

Riffler Files have small dead smooth rasp-like teeth and are most valuable tools for smoothing the rough surfaces of wood carvings, and also for many uses on model building. The variety of shapes adapt them to almost any problem of curves or work in places difficult to reach.

Cabinet Rasps are very useful tools for stages of woodworking, particularly for cutting down and shaping wood across end grain, where edged tools are sometimes at a disadvantage.

Goldenberg & Co. produces one of the foremost lines in the world and their products have a leading call from professional woodworkers.

RIFFLER FILES

Nos. 139-140, 141-142, 143-144, 145-146, 147-148 149-150, 151-152 \$1.50 each
